**DETAILED ACTION**

1. The amendment filed May 22, 2006 is entered and claims 39-46, 48, and 49 are pending.

***Allowable Subject Matter***

2. Claims 39-46, 48, and 49 are allowed.
3. The following is an examiner's statement of reasons for allowance: the claimed invention is directed to a display device.

Independent claim 39 identifies a uniquely distinct feature "a flexible circuit board substantially accommodated within the extended portion in plan view and mounted with an electronic component that overlaps the data signal driver integrated circuit in plan view, the flexible circuit board having an opposing side that at least partially opposes the data signal driver integrated circuit and a signal output terminal provided adjacent an edge of the opposing side, the signal output terminal being electrically connected to the input line at a position of the extended area between one of the short sides of the extended area and the mounting position of the data signal driver integrated circuit".

Independent claim 45 identifies a uniquely distinct feature "a flexible circuit board substantially accommodated within the second extended portion in plan view and mounted with an electronic component that overlaps the data signal driver integrated circuit in plan view, the flexible circuit board having a signal output terminal adjacent one lengthwise edge and a scanning output terminal adjacent the opposite lengthwise

edge, the flexible circuit board having an opposing side that at least partially opposes the data signal driver integrated circuit, the signal output terminal being provided at the opposing side, the signal output terminal being electrically connected to the input line at a position of the second extended area between one of the short sides of the second extended area and the mounting position of the data signal driver integrated circuit, the scanning output terminal being electrically connected to the scanning driver integrated circuit".

Independent claim 46 identifies a uniquely distinct feature "wherein one end of the input line is connected to the bump of the integrated circuit and the other end of the input line is connected to a terminal on the flexible circuit board".

The closest arts, Sugimoto et al and Kishigami as discussed in the previous Office action, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
